

TIPS FOR MAKING YOUR **DENTAL IMPLANT DECISION**

If you are considering dental implants, there are some things you should know about the dentist, practice, or surgeon performing the procedure.

Read the patient reviews • Ask to see REAL before and after photos (not just a few)
Ask to talk with previous patients • Ask to see the dentists' credentials

Ask about patient reviews.

If patients have a great experience and the dentist meets their expectations, they should be more than happy to talk with you about their experience.

At G4, our success is built upon our reputation. Treating all patients like members of our family is a pledge every staff member makes. We have set a new standard in patient care. Our goal has always been to provide the most forward-thinking and luxurious restorative dentistry in the World.

How many times has the dentist performed the procedure?

Experience is paramount in any technique-sensitive operation. Is the dentist performing every aspect of the procedure, from implant placement, to restoration? Often times you are referred to several dentists around town—in the end who is responsible?

Do they have a state-of-the-art laboratory on site? For any facility that performs this procedure regularly, this is necessary.

G4 Technology

We are the only facilities in the world to combine state-of-art offices, equipped with the latest digital technology and full milling centers, equipped with advanced German-Made 5-axis milling machines, utilizing individualized all digital designs made by our world-class engineers.

Does the office have a knowledgeable and professional staff?

When it comes to your oral health, your self-esteem, and your overall well-being, we encourage you to investigate before you decide.

BY GOLPA

TIPS FOR MAKING YOUR **DENTAL IMPLANT DECISION**

When it comes to dental implants and cosmetic dentistry, sometimes we get what we pay for. Unlike buying paper towels, or laundry detergent, where sometimes the “bargain brand” will do, making an investment in yourself should never be a sacrifice.

Dr. Golpa and the G4 team of highly trained doctors spend a considerable amount of time correcting the mistakes made, when patients tried the “bargain brand”. Unfortunately, this results in increased costs and aggravation for the patient who took a “chance” with an inexperienced or unscrupulous dentist or practice.

Because of our proprietary protocols, experience, expertise, and investment in the most advanced milling machines in the world, we can fabricate your bar, and embed it into our custom-milled G4 Ultra® Bridges in less than four hours. We have manufactured well over 10,000 bridges, and this material outperforms any in both laboratory and real-world testing.

Ask about costs and financing options. What factors influence the cost at each facility?

Because of the number of implants we place at our world-class facilities, we receive special pricing from all our vendors. Also, all our centers have a full dental lab and milling center—other facilities outsource most of their cases. We have perfected the G4 Implant Solution, which allows us to perform your surgery with greater efficiency and predictability, and keep our fees among the lowest in the world, while providing the highest quality product.

Beware of traveling to countries like Mexico or Costa Rica for treatment.

When you travel outside of the United States you are subject to that country’s laws, standards, and regulations or lack of any. Receiving any refund or corrective treatment will be nearly impossible!

Ask if there is any kind of guarantee.

G4 Lifetime Dental Implant Warranty

We offer a two-year warranty on our G4 Ultra Bridges. In the rare case of dental implant failure, not only will we remove the dental implant and replace it at no charge, but any corrective procedures required will also be performed at no cost.

Dental Implant Warranty Limitations: If a dental implant fails to integrate we will replace it at no cost, one time only. An annual dental implant examination including x-rays and regular cleanings is an absolute requirement for any warranty to apply. The Warranty does not apply to continue to patients who continue to smoke or persons who have or who develop, an uncontrolled systemic health problem, such as, but not limited to; diabetes, autoimmune disorders, severe osteoporosis, or any condition requiring long steroid use. If smoking or a medical condition is suspected as the cause of implant failure or other complication that requires treatment, an examination and blood tests will be required for warranties to apply.
